

Enhanced Mentoring Program for Architects

For Individuals **Only \$8,000**

This 12-month mentoring program will pair you with a seasoned architecture consultant to help you take your modeling skills to the next level. This program is not a canned training course; it is 1:1 mentoring tailored specifically to your needs and objectives. It combines a half-day intensive training session with 7 weekly mentoring sessions to ensure you can apply your new skills on the job, followed by 10 monthly sessions to provide you support throughout the year..

Who could benefit from this program

- ✔ New Architects who need to ramp up quickly.
- ✔ Experienced architects who want to learn specialized new skill.
- ✔ Architects who are struggling in their jobs and need to improve their performance.
- ✔ Continuing professional development when structured training courses don't meet the need.
- ✔ Skill development for individuals when group training is not cost-effective.

Program Structure

The program starts with an introductory discussion with your mentor about your current skills and the development goals you are trying to achieve during the program. Together you will define the scope and a list of specific topics or skills that will be covered.

The second stage of the program is the "training" section. It is a half-day, hands-on, virtual training session where your mentor will walk you through (in your environment) the skills and topics that you defined. It is encouraged that you record this session so you can refer to it in the future.

The third stage of the program is a series of 7 weekly mentoring sessions where you can ask follow-up questions, ask for feedback on how to apply your new skills and address any topics that may not have been fully covered in the training stage.

The fourth stage of the program is focused on maintaining your skills and helping you refine them through on-the-job experience. As you take on new projects, your mentor will be available to provide you feedback and answer questions along the way.

All Available Services

Mentoring Programs for Individuals: An 8-week 1:1 program that pairs you with an architecture expert to focus on the skills to take your modeling to the next level quickly. Great for professional development or when there aren't enough students for a group training class.

Office Hours for Teams: This 12 month program designed for architecture teams provides monthly "ask the expert" sessions. Conducted at the same time each month so team members can plan for when they will be able to get their questions answered A great addition to your regular staff meetings

Structured Training Classes: Virtually delivered "classroom" type training is available on a variety of architecture topics including architecture frameworks, modeling languages, and use of modeling tool features - for groups of up to 10 students. Custom classes can be designed to meet your specific needs.

Architecture Consulting Services: Our team members are available to come consult with you on a wide variety of topics either on an hourly or deliverable basis. Some examples might include: serving as contractor architects on IT projects, helping you develop your architecture practice and governance, implementing and configuring Architecture tools, and the adoption of architecture standards and frameworks.

Sparx Platform Guided Deployment: Our platform deployment experts will guide you through each step of deploying the Sparx Systems Architecture Platform software including the IT installation as well as configuration tasks such as Repository Structure, RBAC, SSO Integration, SSL certificates and environment hardening. Decrease your deployment time by up to 70% with this service.

Sparx Platform "Health Check": With this recommended annual service, our deployment experts will perform an audit of your Sparx platform deployment to ensure your installation, configuration and documentation are up to date with current best practices. The best way to avoid a major incident is to make sure your platform is up-to-date.

Sparx Platform Support: We offer a variety of technical support options for your Sparx Systems architecture platform ranging from full-service Enhanced Technical Support contracts for enterprise deployments to "Pay as you go" services giving you access to technical experts to help you get through a specific issue
